EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. McClellan (Reg. No. 29,409) on 07/07/2005.

2. The application has been amended as follows: cancel claims 18-32, 40-46 and 48-56.

Allowable Subject Matter

3. Claims 1-10, 14-17, 33-39 and 47 are allowed.

The following is the statement of reasons for the indication of allowable subject matter: The prior art disclosed by the applicant and cited by the Examiner fail to teach or suggest, alone or in combination, a cache memory system and method where selection of addresses to be input to an associative cache is done by selecting from a set of addresses provided by a first and second device, the input addresses are used to access memory in the associative cache, where the accessed memory contains further output addresses that are outputted along with corresponding data from memory to a first device. The output addresses and external address from the second device are used to further to select external addresses for a first device. The art of record also does not disclose the selection mechanism all being by the use of multiplexers.

A new search yielded related prior art, however not teaching all the limitations of the recited claims. Borkenhagen et al. Teaches an associated cache buffer but does not appear to a selection mechanism for the input addresses to the cache. Doing teaches a selection mechanism

at the input and output of a memory device (Fig. 4), however does not indicate the memory being an associative cache.
